Product Goals: Add measurable metrics to evaluate goal achievement later.

User Descriptions: More specifically describe user roles' needs and pain points to align system features.

Product Risks: Further specify risk scenarios and enhance proactive prevention measures.

Comparative Analysis: Add an analysis of how the system gains a competitive edge in industry trends.

Scalability: Expand on the system's scalability and regional adaptability for future growth.

User-Centric Design: Emphasize continuous user feedback during development to optimize user experience.

Consistency in Terminology: Ensure consistent terminology to avoid confusion.

Stakeholder Engagement: Include details on stakeholder involvement throughout the development process.
